PROGRAM OUTPUT

This section provides a comprehensive and detailed visual walkthrough of the Church Management System for Iglesia Filipina Independiente. It highlights the Graphical User Interface (GUI), showcasing the clean, organized, and intuitive design of the secure login portals, account recovery pages, and main navigation features. Through these screenshots, this part demonstrates the system's straightforward and user-friendly layout, which is specifically designed to provide parish administrators and users with a seamless, accessible, and convenient experience. This design promotes clarity, consistency, and ease of navigation, allowing users to efficiently perform tasks and access system functions without confusion or unnecessary steps. It also supports a more organized and systematic interaction flow, ensuring that users can complete their activities with consistency, accuracy, and ease.

Figure 4
Services Request Page – Application Form

The screenshot shows the 'Baptism Application' form in the 'Services Request' section. The form is titled 'Baptism Application v1.0' and includes a fee of 'P700.00'. It contains fields for 'CHILD'S DETAILS' including First Name, Middle Name, Last Name, Suffix, Gender, Date of Birth, and Place of Birth. There are also checkboxes for 'N/A (No middle name/initial)' and 'N/A (No suffix)'. The form is part of a dashboard for 'Iglesia Filipina Independiente' with a sidebar menu and a top navigation bar.

Services Request

Baptism Application v1.0 Fee: P700.00

Please fill in all required details carefully.

CHILD'S DETAILS

FIRST NAME * MIDDLE NAME * LAST NAME * SUFFIX *

☐ N/A (No middle name/initial) ☐ N/A (No suffix)

GENDER * DATE OF BIRTH *

Select Option MM/DD/YYYY

PLACE OF BIRTH *

Figure 5
Services Request Page – Application List

The screenshot shows the 'Applications List' view in the 'Services Request' section. It displays a table of recent applications with columns for Applicant, Service Scope, Date, Time, Status, and Action. The table lists four applications: Pedro Garcia (Approved), Mella Santos (For Payment), Bernardo Cruz (Disapproved), and Yana Reyes (Approved). The form is part of a dashboard for 'Iglesia Filipina Independiente' with a sidebar menu and a top navigation bar.

QUALITY ASSURANCE TESTING RESULT

This section summarizes the results of the Quality Assurance Testing (QAT) procedures conducted on the Church Management System for Iglesia Filipina Independiente in Morong, Rizal. By applying the developed test cases to the system's core features, the project team verified the technical integrity and stability of the platform's architecture. The findings presented here illustrate the pass/fail rates of the system's parishioner records, sacramental management, and financial modules, serving as the strict benchmark to ensure the system meets the required 95% passing rate for its overall technical success. The evaluation results also provide clear evidence of the system's reliability and functionality under different testing scenarios. Furthermore, these outcomes serve as a basis for identifying areas of improvement to further enhance system performance and accuracy.

Test Case ID:	2
Module:	Dashboard & User Profile
Description:	To verify dashboard interactivity, real-time data navigation via summary cards, and the management of user profile details

Item No.	Test Scenario	Test Steps	Expected Results	Status
2.1	Summary Cards Redirection	Click any top summary card (e.g., FOR REVIEW or COLLECTIONS).	The system immediately redirects to the corresponding module page.	Passed
2.2	Graph Interactivity (Hover)	Hover the mouse cursor over a specific month or bar in the Request Activity chart.	A tooltip appears showing the exact numerical breakdown for that specific timeframe.	Passed
2.3	Full Logs Navigation	Click the ALL link in the Recent Logs section.	The system redirects the user to the full Activity Logs/Audit Trail page.	Passed
2.4	Schedules Interactivity	Click the floating Calendar Icon (with the notification badge) at the bottom right of the screen.	The NEXT SCHEDULES panel pops up, displaying a list of upcoming services and their respective dates/times.	Passed
2.5	Notifications Panel	Click the Bell Icon in the header to view Recent alert	The notifications panel opens, displaying recent payment or request alerts	Passed

2.6	Profile Dropdown	Click the User Name/Avatar in the upper right corner.	A dropdown menu appears with options for My Profile and Logout .	<i>Passed</i>
2.7	Profile Detail Update	Edit the FULL NAME field in the profile page and click Save Profile Changes .	System successfully uploads and display. The system updates the account name and reflects the change in the system header. s the selected image as the user's avatar.	<i>Passed</i>
2.8	Security Credential Update	Input new matching passwords and click the Change Password button.	The system successfully updates the login credentials for the account.	<i>Passed</i>

Test Case ID:	3
Module:	Services Request (Application Process)
Description:	To verify if the system correctly handles different service applications and form validations.

Item No.	Test Scenario	Test Steps	Expected Results	Status
3.1	Form Loading & Fee Accuracy	Select a specific service (e.g., Baptism or Wedding) from the Services Request dropdown	The system displays the correct application form and the specific fee badge (e.g., ₱500.00) for that service	<i>Passed</i>

3.2	Successful Application Filing	Fill out all mandatory fields, check the necessary requirements, and click FILE APPLICATION REQUEST .	The system saves the application, displays a "Success" notification, and clears the form.	<i>Passed</i>
3.3	Mandatory Field Validation	Attempt to submit a form with required fields (e.g., First Name or Date) left blank.	The system blocks submission and highlights the specific missing fields with error messages.	<i>Passed</i>
3.4	Requirement Checklist Logic	Toggle the requirement checkboxes (e.g., PSA Birth Certificate) during form completion.	The system successfully records the submission status of the required documents for the specific applicant.	<i>Passed</i>
3.5	Priest Schedule Validation	Select an unavailable date or invalid time slot for the chosen priest.	The system prevents invalid schedule selection and displays a notification message.	<i>Passed</i>

Test Case ID: Module: Description:	4 Applications Management (Admin Side) To verify if the admin can effectively view, search, filter, edit, and approve service applications.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
4.1	Search & Advanced Filtering	Use the Search bar , Status filter , or Date filter to find specific applicants (e.g., Pedro Garcia).	The table instantly updates to display only the records that match the specific search or filter criteria.	<i>Passed</i>
4.2	Record View & Modification	Click the Eye (View) or Pencil (Edit) icon to check or update applicant details.	A modal pops up with accurate data; system saves changes and reflects them in the list immediately.	<i>Passed</i>
4.3	Approval Workflow (Approve/Disapprove)	Click the Checkmark (Approve) or 'X' (Disapprove) icon on a pending request.	Status updates to APPROVED (synced to Schedule) or DISAPPROVED (showing the orange restore icon).	<i>Passed</i>
4.4	Status Sync (For Payment)	Observe the status transition after a request is approved.	The status correctly shifts to FOR PAYMENT , showing who approved the request.	<i>Passed</i>
4.5	Confirm Request	1. Open an application modal. 2. Click the blue 'Confirm Request' button.	Status updates to 'Approved', and the entry is added to the official Schedule.	<i>Passed</i>

4.6	Cancel Request	Click the Red X icon and confirm the action in the prompt.	The system cancels the request and permanently removes it from the active application list.	<i>Passed</i>
-----	----------------	---	---	---------------

The screenshot displays the 'Schedule' interface. On the left, there's a sidebar with filters: 'Create' (5.4), 'ACTIVITY CATEGORIES' (All Categories), 'SERVICES' (5.2, All Services), and a 'COLOR REFERENCE' section listing various activities. The main area shows a calendar for 'May 2026' (5.3) with tabs for 'Month', 'Week', and 'Day'. The calendar grid shows events for May 2026, with specific events like '12:00am Baptis' (5.1) and '9:00am Baptis' highlighted. A modal window for 'SPECIAL MASS Salubong' is shown, displaying the date and time 'Sunday, April 5 at 5:00 AM - 8:00 AM'. Red circles and arrows highlight specific UI elements and actions.

Test Case ID:	5
Module:	Scheduling & Calendar Management
Description:	To verify calendar syncing, multi-layer filtering (Services vs. Categories), and manual event creation for church activities.

Item No.	Test Scenario	Test Steps	Expected Results	Status
5.1	Automatic Schedule Syncing	Approve a service application in the Ministry module and then navigate to the Schedule page.	The approved service (e.g., Baptism) automatically appears on the correct date and time in the calendar.	<i>Passed</i>

5.2	Multi-Layer Filtering	Use the Activity Categories or Services dropdowns to filter the calendar view.	The calendar clearing other events and displays only the specific categories (e.g., Mass) or services (e.g., Wedding) selected.	<i>Passed</i>
5.3	Event Detail & View Toggle	Click on an existing calendar entry and toggle between Month, Week, or Day views.	A modal pops up with full event details (Priest, Applicant, Time), and the calendar layout adjusts correctly to the selected timeframe.	<i>Passed</i>
5.4	Manual Event Creation	Click + Create , fill out the event details (Title, Priest, Date/Time), and click Save .	System saves the custom event (e.g., Parish Meeting) and displays a "Success" notification on the dashboard.	<i>Passed</i>
5.5	Manual Event Modification	Select a manually created event and use the Edit (Pencil) or Delete (Trash) icons.	The system successfully updates the event details or removes the entry from the calendar database.	<i>Passed</i>

Item No.	Test Scenario	Test Steps	Expected Results	Status
10.1	Priest Selection & Configuration	Select a priest from the Assignees list, toggle specific Availability (Working Days) , set Limits & Hours , and click Save .	The system saves the configuration, displays a success notification, and correctly updates the rules for that specific priest.	<i>Passed</i>
10.2	Booking & Time Restriction Logic	Navigate to any Service Request form, select the configured priest, and open the Date/Time Picker .	Deselected days are automatically blocked/disabled in the calendar, and the system restricts time selection to the set Standard Hours .	<i>Passed</i>
10.3	Appointment Limit Enforcement	Fill out applications up to the set Daily Service Limit for one specific date and priest.	Once the limit is reached, the system automatically hides or disables that specific date for the priest in all future application forms.	<i>Passed</i>
10.4	Configuration Persistence	Save a new schedule set and perform a page refresh or re-login.	All toggled days, time ranges, and numerical limits remain accurately stored and displayed exactly as previously configured.	<i>Passed</i>

Test Case ID: Module: Description:	11 System Configuration (Services & Requirements) To verify the creation, customization, and management of church service types, including fees, durations, and mandatory document requirements.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
11.1	Service Type Creation	Click + Add Service , input the Service Name , Standard Fee , and Duration , then click Save .	The system successfully adds the new service to the registry with the correct icon and assigned hex color.	<i>Passed</i>
11.2	Dynamic Requirement Management	Add or remove specific tags (e.g., PSA Birth Certificate) in the Requirements field for a service.	The system accurately updates the list of mandatory documents needed for that specific sacramental application.	<i>Passed</i>
11.3	Module & Sidebar Integration	Create a new service and verify its appearance in the Ministry > Services Request sidebar.	A new navigation link and application form appear dynamically in the sidebar, matching the newly created service configuration.	<i>Passed</i>
11.4	Service Maintenance (Edit/Delete)	Use the Pencil (Edit) or Trash (Delete) icons to modify existing service parameters or remove them.	The system updates the records in real-time or removes them from the active registry, maintaining database integrity.	<i>Passed</i>
11.5	Restore/History Logic	Click the History/Restore icon for a previously modified or archived service.	The system displays previous configurations or successfully reinstates an archived service type to the active list.	<i>Passed</i>

Test Case ID: Module: Description:	12 System Configuration (Payment Methods) To verify the management of accepted payment channels, including the ability to add new methods, toggle active status, and archive unused options.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
12.1	Add New Payment Method	Click + Add Method , input the Method Name (e.g., Atome), and click Save .	The system successfully saves the new method and displays it in the registry with an "Active" status badge.	<i>Passed</i>
12.2	Visibility & Detail Modification	Toggle the Active/Inactive switch or click the Pencil (Edit) icon to update a method's info.	The system updates the status or details in real-time; inactive methods are hidden from the Finance module dropdowns.	<i>Passed</i>
12.3	Archive & Removal Logic	Click the Orange Trash (Archive) icon and confirm the action in the prompt.	The payment method is removed from the active list, preventing its selection for any future church transactions.	<i>Passed</i>
12.4	Permanent Deletion	Select an archived payment method and click the Red Delete icon to purge the record.	The system permanently removes the record from the database, and it can no longer be restored or viewed in any list.	<i>Passed</i>

Test Case ID: Module: Description:	13 System Configuration (Finance Categories) To verify the classification management of church funds, including collection types, mass sources, and donation fund labels.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
13.1	Tab Navigation & Viewing	Switch between the Collection Types , Collection Sources , and Donation Fund Types sub-tabs.	The table accurately updates to display the specific category labels assigned to each finance sub-module.	<i>Passed</i>
13.2	New Category Creation	Click + Add Category , fill out the Name , select the "For" module, choose an Icon , and click Save .	The system successfully saves the new category (e.g., Building Fund) and displays it in the corresponding sub-tab registry.	<i>Passed</i>
13.3	Category Management (Edit/Reorder)	Use the Pencil (Edit) icon to modify a name or the Drag Handle (six-dots) to change the display sequence.	The system updates the label details in real-time and successfully saves the new priority order for forms.	<i>Passed</i>
13.4	Archive & Removal Logic	Click the Orange Trash (Archive) icon for an unused category and confirm the removal.	The category is removed from the active list, ensuring it no longer appears as an option in new transaction forms.	<i>Passed</i>
13.5	Cross-Module Integration	Navigate to the Collections or Donations entry forms and check the dropdown options.	All newly added, edited, or reordered categories accurately appear in the dropdown menus for data entry.	<i>Passed</i>

Test Case ID:	14			
Module:	System Configuration (Backup & Restore)			
Description:	To verify the manual generation, external uploading, downloading, restoring, and automated scheduling of system database backups.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
14.1	Manual & External Backup Handling	Click Generate Backup or Upload External Backup and select a valid .sql file.	A new backup entry appears in the list with the correct DATE GENERATED and SIZE (e.g., 1.17 MB).	<i>Passed</i>
14.2	Archive Actions (Restore, Download, Delete)	Use the Restore , Download , or Delete action icons on a specific backup file in the registry.	The system successfully restores to a previous state, triggers a browser download, or removes the file from archives.	<i>Passed</i>
14.3	Automated Local Backup Scheduling Archive	Configure the Storage Path , Frequency (e.g., Daily), and Time , then click Save Settings .	The configuration is saved, and the system automatically generates backups according to the defined local schedule.	<i>Passed</i>

Test Case ID:	15			
Module:	System Roles & Permissions			
Description:	To verify the management of system user roles and the granular assignment of View and Edit permissions for every system module.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
15.1	Granular Role Creation	Click + Add Role , input Role Name , toggle specific View or Edit permissions for modules, and click Save Role .	System saves the role and displays it in the list with corresponding access tags (e.g., Dashboard Edit, Schedule Edit) for each assigned module.	<i>Passed</i>

15.2	Permission Updating	Click the Blue Edit icon for an existing role and modify its module access toggles in the modal.	The system updates the role's permissions in real-time, and the changes reflect accurately in the registry list.	<i>Passed</i>
15.3	Role Deletion Logic	Click the Red Trash icon for a role (e.g., Usher) and confirm the action in the prompt.	The role is permanently removed from the system registry, and associated access levels are revoked.	<i>Passed</i>
15.4	Delete Role Validation	Click the Red Trash icon for a role (e.g., Usher) and confirm the action in the prompt.	The role is permanently removed from the system registry, and associated access levels are revoked.	<i>Passed</i>
15.5	Access Level Integrity	Verify that roles like Usher only show specific access (e.g., Schedule and General Settings) compared to the Admin's full access.	The registry correctly displays segregated module visibility and actions based specifically on the assigned permission tags for each role.	<i>Passed</i>

Test Case ID:	16			
Module:	User Accounts Management			
Description:	To verify the full lifecycle of internal system users, including account creation, role assignment, search filtering, archiving, and data purging.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
16.1	Account Creation & Validation	Click + Create Account , fill out Full Name , Email , select a Role , and set a password (min. 8 characters).	The system saves the new account and automatically assigns the correct permissions based on the selected role.	<i>Passed</i>

16.2	Status Tracking & Search	Use the Search user bar and verify the Status (Active/Inactive) of accounts in the registry.	The list accurately filters records based on the keyword, and the status indicators correctly reflect the user's current access state.	<i>Passed</i>
16.3	Account Modification	Click the Blue Pencil (Edit) icon to update a user's role or contact information.	The system updates the user details in real-time, and the changes are reflected immediately in the account registry.	<i>Passed</i>
16.4	Archiving Workflow	Click the Orange Trash (Archive) icon for an active or inactive user account.	The account is moved from the Active tab to the Archived tab, preventing the user from logging in.	<i>Passed</i>
16.5	Restore & Permanent Deletion	In the Archived tab, click the Green Restore icon or the Red Delete icon.	The system successfully reinstates the account to the active list or permanently purges the record from the database.	<i>Passed</i>

Test Case ID: 17 Module: Comprehensive Reporting & Data Export Description: To verify the generation of detailed parish reports based on specific categories and date ranges, including live preview and multi-format export capabilities.				
Item No.	Test Scenario	Test Steps	Expected Results	Status
17.1	Report Filtering & Live Preview	Select a Category (e.g., Services Aailed), Service Type , and define the From/To Date range.	The report preview dynamically updates its header (e.g., SERVICES AWAILED REPORT) and content to match the selected filters exactly.	<i>Passed</i>

17.2	Multi-Format Export Functionality	Click the Export Excel and Export PDF buttons after generating a report preview.	The system successfully generates and downloads the file in the chosen format with professional formatting and accurate data.	<i>Passed</i>
17.3	Category Specific Logic	Switch between categories like Collections , Donations , and List of Recipients .	The system adjusts the report columns and summary totals based on the specific requirements of the selected finance or service category.	<i>Passed</i>
17.4	Date Range Validation	Set the To Date earlier than the From Date or select a range with no existing records.	The system prevents report generation or displays a "No data found" message to ensure the integrity of the reporting period.	<i>Passed</i>

Test Case ID:	18			
Module:	Administration Turnover			
Description:	To verify the summary of the current term, the process of transferring parish control, and the archival of turnover history.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
18.1	Term Summary Accuracy	Navigate to Turnover and verify the Term Summary Report (Revenue and Services Done).	The dashboard correctly displays real-time totals for Collections, Donations, and Service Fees gathered during the current priest's term.	<i>Passed</i>
18.2	Handover Awareness	Check the Pending Requests to Handover counter.	The system accurately identifies and counts all active applications that need to be transitioned to the incoming administrator.	<i>Passed</i>

18.3	User Attribution	1.Perform an action using the 'Admin' account.	The log accurately identifies the specific account name and role that performed the action.	<i>Passed</i>
18.4	Execute Transfer Logic	Select an Incoming Priest , set the Official Transfer Date , and click Finalize Turnover .	The system prompts a final warning, locks the current term's records, and reassigns system control to the new administrator.	<i>Passed</i>
18.1	Term Summary Accuracy	Navigate to Turnover and verify the Term Summary Report (Revenue and Services Done).	The dashboard correctly displays real-time totals for Collections, Donations, and Service Fees gathered during the current priest's term.	<i>Passed</i>

Test Case ID:	19			
Module:	Activity Logs (Audit Trail)			
Description:	To verify the chronological tracking of system events, user actions, and the ability to filter and export logs for security auditing.			
Item No.	Test Scenario	Test Steps	Expected Results	Status
19.1	Real-time Log Generation	Perform any system action (e.g., Login or update a service) and navigate to Activity Logs .	The system automatically captures the event and displays it at the top of the list with the correct Date & Time, User, and Role .	<i>Passed</i>
19.2	Search & Role Filtering	Use the Search logs bar or the All Roles dropdown to filter the registry.	The table instantly updates to show only the activities that match the specific keyword or user role selected.	<i>Passed</i>

19.3	Audit Detail Accuracy	Review the content of the Action and Details columns for recent entries.	The system provides clear, specific descriptions (e.g., "Updated service type: Baptism") that accurately reflect the action performed.	<i>Passed</i>
19.4	Log Export Functionality	Click the Export to Text button located at the top right of the table.	The system successfully generates and downloads a text file containing the audit trail records for external review.	<i>Passed</i>

Table 1

Composite Table of the Quality Assurance Testing of the Developed Church Management System for Iglesia Filipina Independiente in Morong, Rizal.

Test Case Number	Test Function	Number of Items	Number of Items Passed
1	User Login & Security	5	5
2	Dashboard & User Profile	8	7
3	Services Request (Application Process)	5	5
4	Applications Management (Admin Side)	6	6
5	Scheduling & Calendar Management	5	5
6	Services History & Certificate Generation	5	5
7	Finance: Collections & Donations	5	5
8	Services Fees Registry & Payment Processing	5	5
9	System Configuration (General Settings)	4	4
10	System Configuration (Priest Availability & Limits)	4	4
11	System Configuration (Services & Requirements)	5	5
12	System Configuration (Payment Methods)	4	4
13	System Configuration (Finance Categories)	5	5
14	System Configuration (Backup & Restore)	3	3
15	System Roles & Permissions	5	5
15	User Accounts Management	5	5
16	Comprehensive Reporting & Data Export	4	4
17	System Activity Logs (Audit Trail)	4	3
18	Administration Turnover	5	5
19	Activity Logs (Audit Trail)	4	3
	TOTAL	96	93

QA Testing Result = (No. of Passed Test Case / No. of Total Test Case) * 100

QA Testing Result = (93/96) * 100

QA Testing Result = 0.9687 * 100

QA Testing Result = 96.88%

The results of the Quality Assurance (QA) testing for the developed Church Management Information System reveal a high level of functional integrity, achieving an overall success rate of **96.88%**. This performance is calculated from the successful execution of **93 out of 96** total test scenarios. Analysis shows that core modules—including User Login & Security, Services Request, Scheduling, and Finance Management—performed with high reliability, while a few specific cases in Dashboard interactivity and Reporting identified minor areas for further optimization.

The implication of these findings is that the system is **"Deployment Ready."** Achieving beyond the industry benchmark of a 95% passing rate indicates a robust and reliable system architecture. Although a small number of test cases required minor revisions, these do not significantly affect the overall system performance. The results demonstrate that both front-end "gatekeeper" functions and back-end administrative processes operate effectively, ensuring system stability for subsequent User Acceptance Testing (UAT). Supporting this assessment, the ISO/IEC 25010 software quality standard emphasizes that achieving high functional benchmarks is essential in verifying that system features conform to specified requirements prior to official deployment.
